Manuel Palenque — Live A/V & Performance EPK (2026/2027 North America Touring)

> **Real-Time Audiovisual Systems, Industrial/Experimental Club & Laser/DMX Synchronization.**

---

1. Quick Facts & Touring Availability

Field	Details
Artist	Manuel Palenque (solo or duo configuration)
Format	Live A/V Performance (`COLAPSO` / `Syncro A/V` Live Set)
Duration	45 – 60 minutes (adaptable to 40-min festival slot or extended club/late-night set)
Aesthetic & Genre	Real-Time Generative A/V · Industrial / Experimental Club · Avant-Garde Electronic · Tightly Coupled Laser/DMX & Particle Physics
Base & Routing	Buenos Aires, Argentina · **Frequently traveling to NYC, Chicago, and Miami**
Visa & Touring Status	**US Visa Active** — Zero visa sponsorship friction; available for immediate North American club, festival, museum, and university routing (2026–2027)
Touring Footprint	**100% Carry-On Fly-In Rig** (1–2 performers, zero checked backline freight required)
Direct Booking Contact	contact@manuelpalenque.info · WhatsApp/Tel: `+54 9 11 6637–2965`
Web & Portfolio	mpalenque.github.io · mpalenque.github.io/syncro-av

---

2. Artist Positioning & Live Performance Overview

Manuel Palenque is an Argentine creative technologist, visual artist, electronic music producer, and live A/V performer with over 15 years of international experience building real-time audiovisual architectures across Tokyo, Hong Kong, Berlin, Venice, Barcelona, and the Americas.

His 45–60 minute live performance (**COLAPSO** / **Syncro A/V**) rejects pre-rendered video playback in favor of a **tightly coupled, real-time generative system** where sound, image, and physical stage lighting are synthesized together in the moment of performance. Built on custom real-time engines (**vvvv**, **TouchDesigner**, **WebGPU**, custom **GLSL/HLSL compute shaders**, and **SDF raymarching**), the system links live electronic synthesis and industrial/experimental club rhythms directly to GPU-accelerated particle physics and venue lighting fixtures via **DMX512 / Art-Net / sACN** and laser control.

How the Live System Operates

1. **Unified Audiovisual Synthesis (`Syncro A/V` Architecture):** Acoustic transients, sub-bass pressure waves, spectral centroids, and MIDI/OSC state changes do not merely trigger visual clips—they act as physical forces inside a real-time 3D simulation. Sound deforms spatial geometry, drives millions of colliding GPU particles, and modulates shader materiality at 60+ fps.
2. **Spatial Extension via DMX & Lasers:** The visual frame is not confined to the screen. The same real-time parameters driving the projection or LED wall simultaneously control the venue's physical lighting rig (strobes, moving beams, LED bars, and lasers), extending the digital environment into the physical architecture of the room through haze and high-contrast shadow.
3. **Dramaturgy of Order vs. Entropy (`COLAPSO`):** Structurally, the performance unfolds as an escalating tension between algorithmic control and systemic collapse. Beginning with razor-sharp, sub-millisecond perceptual lock (*synchresis*, *temporal binding*, and *rhythmic entrainment*), the harmonic and geometric structures progressively destabilize as the visual and lighting systems assert autonomy—culminating in an immersive, visceral confrontation with digital and physical entropy.
4. **3D Digital Twin Pre-Visualization:** Originally developed to solve zero-rehearsal constraints at massive venues like **Tecnópolis**, Palenque builds a complete **3D Stage Digital Twin** of each festival or club setup prior to arrival—simulating custom screen ratios, LED pixel pitches, sightlines, and DMX fixture universes in software so the show lands locked-in from the first minute of line check.

---

3. Biographies & Curatorial Artist Statement

Short Bio (100 Words — Ready to Copy for Programs & Flyers)

> **Manuel Palenque** is a Buenos Aires–based creative technologist, visual artist, and live A/V performer with over 15 years of experience at the intersection of real-time computer graphics, electronic sound, and spatial lighting. His performances and interactive installations have been presented at MUTEK, Tecnópolis, SuperDeluxe (Tokyo), the Venice Biennale context (Bright Moments Venezia), School of Creative Media (Hong Kong), NODE Festival (Berlin), and Telenoika (Barcelona). Formerly Technical Video Director for Fuerza Bruta and currently Senior Creative Technologist (Immersive & AI) at Superside, he is the founder of **DataRaíz** and director of the **Ciclo Negro** art-and-technology festival at ArtHaus.

Full Bio (250 Words — Ready to Copy for Institutional Catalogs & Press)

> **Manuel Palenque** (b. 1986, Buenos Aires) is a visual artist, electronic musician, and Senior Creative Technologist specializing in tightly coupled real-time audiovisual performances, large-scale interactive installations, and 3D stage digital twins. Over a 15-year career spanning South America, Europe, Asia, and the United States, Palenque has engineered systems where generative sound, GPU particle physics, custom shaders, motion capture, and DMX/laser lighting operate as a single performative instrument.
>
> His live A/V works and monumental installations—including *COLAPSO*, *Verano Tecnópolis* (*Bosque* and *Techo*), the *Buenos Aires Planetarium FullDome 360° Interactive System*, and the 45-meter *Coloso* LED tower with DOMA Collective—have reached hundreds of thousands of spectators. Internationally, he has performed and led technical workshops at **MUTEK** (CCK & Matienzo), **Beyond Code #2 at SuperDeluxe** (Tokyo), **TECH LAB PAAK** with the vvvv Japan community (Tokyo), **NODE Forum for Digital Arts** (Berlin), **City University of Hong Kong's School of Creative Media**, and **Telenoika** (Barcelona). In the large-scale spectacle and commercial realm, he has served as Technical Video Director for **Fuerza Bruta**, directed full A/V and sensor synchronization for Argentina's **Fiesta Nacional de la Vendimia** (500+ stage performers), developed VR experiences for **Cirque du Soleil's Messi10 Challenge**, created kinetic retail installations for

> **Adidas NMD**, and directed global live generative art productions for **Bright Moments** in Venice, Paris, London, and Buenos Aires.
>
> Currently serving as Senior Creative Technologist (Immersive & Creative AI Architectures) at **Superside**—orchestrating systems for clients including Google, Meta, and Reddit—Palenque is also the founder of **DataRaíz** (`dataraiz.io`), an independent Buenos Aires media lab, and creator of **Ciclo Negro** (`ciclonegro.dataraiz.io`), a 12-hour avant-garde festival at ArtHaus.

Curatorial Artist Statement (English — Translated & Adapted from Original Dossier)

> **My artistic practice is born from friction.** I do not believe in costless art; I seek equilibrium through self-imposed technical and perceptual challenges, transforming obsession with complexity into the indispensable engine of authentic creation. Coming from a Latin American context shaped by structural volatility, mastering real-time technology was never a luxury—it was a vital survival strategy where urgency coexisted with relentless curiosity.
>
> **I view technological progress with pragmatic cynicism.** I reject the industry's sanitized, utopian narrative of "digital democratization"; I know full well that these tools bring crisis, extraction, and obsolescence. Yet rather than retreating from the tide, I choose to ride and subvert it. I deploy artificial intelligence, real-time shaders, and custom code without blind reverence, maintaining a **critical distance**: automating the tedious and **hijacking corporate-grade architectures** to pry open fractures where raw, unpolished human vision can infiltrate.
>
> In live performance, **I pursue a synchronization that aspires to absolute technical perfection, knowing it will ultimately fracture.** I build audiovisual and lighting systems that fight for total mathematical order while embracing failure and overload as core dramaturgical material—because in the end, entropy always confronts us, reminding us that beneath the digital layer, reality remains an uncontrollable phenomenon.

4. Selected Live Works, Festivals & Credentials

Year	Project / Event	Venue & City	Role & Technical Highlights
2025–2026	**DataRaíz: Ciclo Negro**	ArtHaus Central (Sala Oval / Piso 7), Buenos Aires	**Founder, Artistic Director & Live A/V Performer.** 12-hour marathon festival of interactive installations, masterclasses (`Syncro A/V`), critical talks, and live A/V sets on custom P2 4×3m LED & DMX stage.
2022–2026	**COLAPSO (Live A/V + 3D Digital Twin)**	Tecnópolis & Touring, Buenos Aires	**Creator & Live A/V Performer.** 40–60 min real-time A/V show built in `vvvv` with GPU particle physics, custom DMX lighting sync, and a full 3D Stage Digital Twin engineered over a 30-day sprint to bypass zero venue rehearsal time.
2023–2024	**Bright Moments (Venezia & Buenos Aires)**	Renaissance Church (Venice, Italy) & Buenos Aires	**Global Design, Technical Direction & Live Production.** In Venice: site-specific installation & live minting performance combining real-time fluid simulation, physical water reflections, reactive DMX lighting, LiDAR spatial scans, and generative sound. In Buenos Aires: 8-hour un-rehearsed

Year	Project / Event	Venue & City	Role & Technical Highlights
			marathon performance mapping 200 live-minted generative sets to real-time light beams and stage cues for dancers, actors, and musicians.
2023	**FullDome 360° Interactive System**	Buenos Aires Planetarium / Fulldome Venues	**Lead System Architect & Visual Artist.** Zero-download QR + WebSockets distributed interactive architecture enabling hundreds of audience members to simultaneously manipulate 360° fulldome generative visuals in real time on their phones.
2023	**Verano Tecnópolis (Bosque & Techo)**	Tecnópolis (Feria IT Joven / Electronic Arts Lab), Buenos Aires	**Interactive Systems & Real-Time Visual Artist.** Park-wide real-time interactive environments coupling Kinect depth tracking, 2D/3D fluid simulations, lasers, projections, and reactive DMX moving beams.
2023	**Messi10 Challenge**	Cirque du Soleil (Touring Lounge Experience)	**VR Experience Lead.** Designed and developed an interactive VR stadium experience for Cirque du Soleil's Messi-inspired production.
2022	**Wall — Adidas NMD**	Adidas Flagship / Retail Activation, Buenos Aires	**Interactive Director & Creative Technologist.** Large-format LED interactive wall driven by Kinect depth sensors and real-time GPU fluid dynamics reacting instantaneously to passersby.
2017	**MUTEK Buenos Aires (Edition 1)**	CCK (Centro Cultural Kirchner) & Club Cultural Matienzo	**Live A/V Artist (with Tatiana Heuman).** High-intensity experimental electronic and real-time visual performance exploring extreme audio-visual sync.
2016	**Beyond Code #2 & TECH LAB PAAK**	SuperDeluxe & TECH LAB PAAK, Tokyo, Japan	**Live A/V Performer & Visiting Workshop Instructor.** Performed live A/V at Tokyo's legendary underground venue SuperDeluxe (invited by Atsushi Tadokoro alongside Renick Bell, lycoriscoris × Baku Hashimoto, Intercity-express × Shuhei Matsuyama, Vegpher × Kitasenju Design) and taught `vvvv + Ableton Live` real-time synchronization with the vvvv JP community.
2015–2018	**Fuerza Bruta & Fiesta Nacional de la Vendimia**	Tokyo / Buenos Aires / Mendoza	**Technical Video Director (Fuerza Bruta) & Lead A/V Sync Director (Vendimia).** Directed full synchronization of live visuals, floor projection mapping, pixel LED, Kinect motion tracking of dancers, and custom TV broadcast feeds for 500+ performers on stage.
2012–2024	**Coloso de Tecnópolis (with DOMA Collective)**	Tecnópolis, Buenos Aires	**Custom Video-to-LED Control Systems Engineer.** Engineered and maintained custom real-time video-driven LED animation pipelines for a monumental 45-meter outdoor public sculpture over a decade of operation.
2015–2025	**International Academic & Media Lab Circuit**	Hong Kong · Berlin · Barcelona · Buenos Aires	Visiting workshops, performances, and talks at **School of Creative Media (CityU Hong Kong)**, **NODE Festival for Digital Arts (Berlin)**, **Telenoika (Barcelona)**, and **AiAiAi! Vol. 3 (Buenos Aires)**.

6. Compact Fly-In Technical Rider & Stage Plot

> **TOURING LOGISTICS NOTE: Compact fly-in setup ready for international touring. Frequently traveling to NYC, Chicago, and Miami (US Visa active).** All artist hardware fits inside standard airline carry-on luggage, eliminating international cargo carnets, oversized baggage fees, and complex backline rentals.

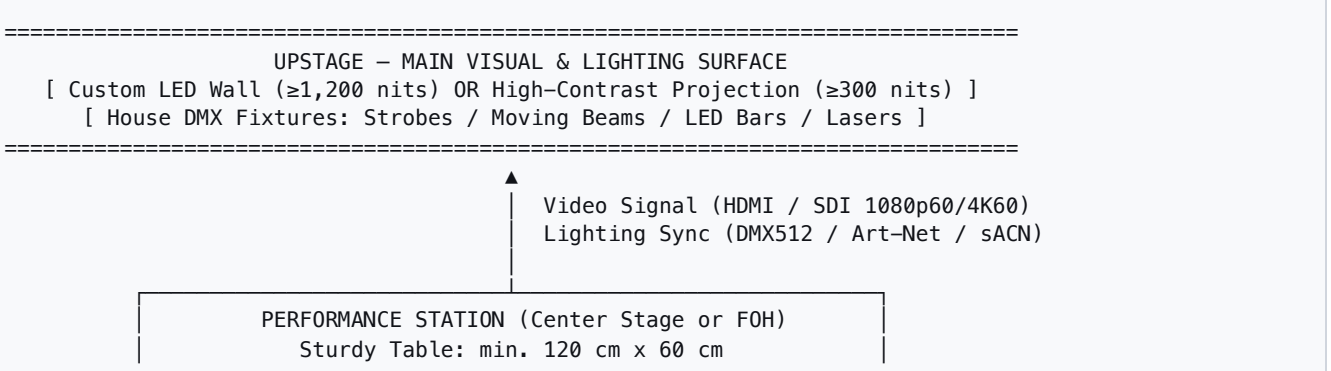

A. What Artist Brings (Carry-On Fly-In Rig)

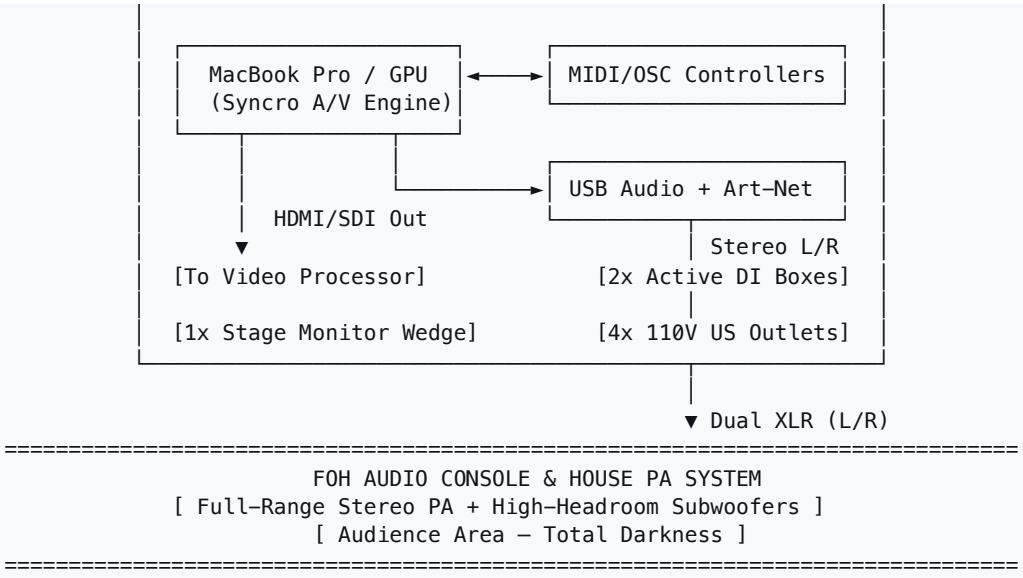

Item	Specification & Role
Primary Real-Time Workstation	High-performance laptop (Apple Silicon M-Series Max/Pro MacBook Pro or dedicated RTX GPU workstation) running the custom `Syncro A/V` & `COLAPSO` real-time generative engine (`vvvv`, `TouchDesigner`, `WebGPU`, custom GLSL/HLSL compute shaders).
Tactile Control Surface	Compact, bus-powered MIDI / OSC hardware controllers for live parameter modulation, shader state transitions, and real-time audio-visual-lighting improvisation.
Audio & DMX/Art-Net Interfaces	Ultra-low-latency USB-C balanced stereo audio interface + portable USB/Ethernet DMX512 / Art-Net node interface.
3D Stage Digital Twin Software	Pre-built 3D stage simulation environment allowing the artist to map into the venue's exact screen aspect ratio and DMX patch address table prior to load-in.
Local Signal Cabling	Dual 1/4" TRS to XLR/DI patch cables, HDMI/USB-C video adapters, and Cat6 Ethernet / 5-pin DMX turnaround adapters.

B. What Venue Provides (Local Backline & Production Requirements)

System Category	Venue Production Specification
1. Audio / PA System	• **PA System:** Concert-grade, full-range stereo PA system (e.g., L-Acoustics, d&b audiotechnik, Meyer Sound, Funktion-One) with **high-headroom subwoofers** capable of reproducing deep, sub-bass frequencies cleanly and without distortion. • **Signal & Connections:** Two (2) active balanced DI boxes (or 2x balanced XLR stereo line inputs, Left/Right) at the performance station. • **Monitoring:** One (1) full-range high-output stage monitor wedge at the performance station (or stereo wired IEM feed).
2. Video Display (LED or Projection)	• **Scalability:** The visual engine is natively scalable to any display format, including custom LED wall configurations, large-scale architectural/stage projection mapping, and non-standard aspect ratios. • **Signal Feed:** One (1) **1080p60** or **4K60** video input (HDMI 2.0+ or 3G/12G-SDI with local HDMI-to-SDI converter) run directly to the performance table. • **Luminance & Contrast (Mandatory for *COLAPSO*):** Exceptional brightness and dynamic range are essential: – **LED Installations:** Minimum **1,200 nits** output. – **Projection Setups:** Minimum **300 nits** surface luminance with a native contrast ratio of **≥ 10,000:1**.
3. Lighting, Laser & Darkness Control	• **Ambient Light Control (CRITICAL):** The visual narrative relies heavily on **absolute, deep blacks**. The venue must maintain strict control over ambient light pollution (exit signs masked where legally permissible, bar lights dimmed/shielded). **Total or near-total room darkness** is mandatory. • **DMX / Art-Net Integration:** One (1) **DMX512** (3-pin or 5-pin XLR) or **Art-Net / sACN Ethernet** universe input at the performance table (plus house DMX patch sheet sent 72h prior) so the artist's engine can synchronously trigger house strobes, moving beams, LED pars, and lasers. • **Atmospherics:** One (1) professional **Haze Machine** (water- or oil-based hazer, evenly distributed) strongly required to materialize light and laser beams in 3D space.
4. Stage Station & Power	• **Performance Table:** One (1) sturdy, vibration-free table or riser station (minimum **120 cm × 60 cm**, height **90–100 cm**), dressed in black scrim, positioned either **Center-Stage** (in front of screen) or at **FOH Booth** with unobstructed sightlines to the main visual surface. • **Electrical Power:** Four (4) grounded, stabilized **110V–120V US power outlets** (15A/20A circuit shared with audio ground to prevent ground-loop hum) at the performance table. • **Line Check & Rehearsal:** Minimum **45-minute** dedicated sound, video, and DMX/Art-Net line check prior to doors.
