MANUEL PALENQUE — INSTALLATIONS & TALKS

Interactive Environments, Real-Time Systems & Stage Direction

Buenos Aires · `contact@manuelpalenque.info` · mpalenque.github.io

1. PRACTICE

Manuel Palenque is a visual artist and creative technologist with over 15 years of experience building real-time audiovisual performances, interactive exhibitions, and spatial installations. Working across custom real-time rendering (vvvv, TouchDesigner, shaders), motion capture, electronic sound, and stage lighting, he develops responsive environments for museums, festivals, theatrical productions, and public spaces.

Alongside his independent practice, he serves as **Senior Creative Technologist at Superside**, previously worked as **Technical Video Director for Fuerza Bruta**, directs the **Dataraiz** media lab in Buenos Aires, and founded the **Black Cycle** art and technology festival at ArtHaus.

2. SELECTED INSTALLATIONS & SPATIAL PROJECTS

Bright Moments — Venezia & Worldwide (2024)

In Venice, the installation sat inside a Renaissance church: a real-time fluid simulation, lighting that answered it, physical water on the floor, and generative music—all calibrated to the architecture of the building. Worldwide, Palenque led the design, technical direction, and production of Bright Moments' live digital art experiences and events.

Verano Tecnópolis (2023)

Large-scale generative installations running in real time across the Tecnópolis park in Buenos Aires, driven by optical motion capture. Lights, lasers, projections, and LED screens are fed from the same real-time system and respond directly to visitors moving in front of them.

Colapso — Live A/V & 3D Digital Twin Stage System (2022–Present)

A 45-minute live audiovisual performance presented across a 30-show run at Tecnópolis. Particle systems in vvvv, electronic sound, and stage lighting communicate in real time. The stage setup—screens, lighting fixtures, and spatial geometry—is rehearsed and pre-visualized inside a 3D digital twin prior to physical mounting.

Adidas NMD — Interactive Wall (2022)

Depth-camera motion capture (Kinect) turned an architectural retail wall into a responsive surface where real-time generative visuals answer passersby before they decide to stop and look.

Buenos Aires Planetarium — FullDome 360°

Real-time generative visual systems and spatialized electronic sound designed specifically for hemispherical fulldome projection at the Galileo Galilei Planetarium.

Fuerza Bruta — Technical Video Direction

Technical video direction and live show control for the international immersive theater company, managing real-time media playback and touring video architecture under high-intensity stage conditions.

3. TALKS & LECTURES

01 / Sync A/V — How We Perceive Sound and Image as One

A 90-minute talk with video examples on the seven mechanisms of multisensory integration (synchresis, the ventriloquism effect, the McGurk effect, the temporal binding window, common fate, rhythmic entrainment, and prediction/reward) and how they shape live audiovisual composition.

Web: mpalenque.github.io/syncro-av

02 / Real-Time Spatial Systems: From Digital Twin to Physical Stage

A technical and artistic lecture on designing large-scale interactive installations and live A/V shows—covering motion tracking, multi-surface calibration, DMX/laser integration, and pre-visualizing complex physical stages in real-time 3D environments.

03 / Generative Pipelines & Creative Technology in Practice

Drawing from his work as Senior Creative Technologist at Superside and founder of Dataraiz, this talk explores how real-time rendering, shaders, and emerging AI tools can be integrated into rigorous visual design and interactive workflows without losing artistic authorship.

---

4. CREDENTIALS SUMMARY

- Current Roles: Visual Artist · Senior Creative Technologist, Superside · Founder, Dataraiz & Black Cycle
- Past Roles: Technical Video Director, Fuerza Bruta
- International Presentations: MUTEK Buenos Aires · Bright Moments Venezia (Venice) · NODE Festival (Berlin) · Beyond Code #2 & TECH LAB PAAK (Tokyo) · School of Creative Media, CityU (Hong Kong) · Telenoika (Barcelona) · Tecnópolis & ArtHaus (Buenos Aires)
- Education: Electronic Arts, Universidad Nacional de Tres de Febrero (UNTREF), Buenos Aires

---
